Lab 6 Self Reflection
11/02/2026

When creating my adoption agent, I tried to use a less tempermental approach to the system instructions, to try and force a decision under many unknowns. I continued to use GPT-6 Astra Ulta because of the positive benefits it gave me from my last agent. I found the agent to be very good at indicating not to adopt a technology, I'm very curious how it will perform with all the different technology cases my team will bring. Just like my previous agents, this one is generalized enough to handle any technology across any industry. I also tried to tie in the concepts from chapters 8 and 9 more deeply to the agent, so I noticed it exhaustively lists each dimension of technology task fit, and it's score, which I believe is a good thing. I think my technology case of bi-directional grid-charging cars is quite far out, so I can see why my agent decided not to adopt in any of the contrasts.
